The Scientific Committee:
Joerg Frommer (Co-Chair)
Célia Sales (Co-Chair)
Robert Elliott
Valentin Escudero
Chris Evans
João Hipólito
Raúl Magalhães Lopes
Gabriela Moita
John McLeod
Carla Moleiro
Odete Nunes
António Roma Torres
António Branco Vasco
Michael Wieser

The Organizing Committee:
Célia Sales (Co-Chair)
Gabriela Moita (Co-Chair)
Inês Alexandre
Paula Alves
Paulo Jorge Cabrita
Liliana Ribeiro

June Newsletter

The Organising Committee is pleased to invite you to attend the International Summer School from 24-26 September, 2010

Conference update

Registrations

The early registrations are still open until 15th July. Join us!

Program

Research Workshops with Professor Jörg Frommer, Professor Célia Sales, Professor Chris Evans, Professor Peter Stratton;
Plenary Sessions with John McLeod, Joerg Frommer, Robert Elliott, Chris Evans, Peter Stratton

Additionally, we also have a Methodological Discussion Workshop and International Panels with Communications and Presentations (information available soon)

Informations & Registrations http://iss2010.ual.pt

Scientific Societies that support this event
• Society for Psychotherapy Research - Europe (SPR-EU)
• Associação Portuguesa de Terapia Familiar e Comunitária (APTEFC)
• Associação Portuguesa de Psicoterapia centrada na Pessoa e Counseling (APPCPC)
• Sociedade Portuguesa de Psicodrama (SPP)
• Federation of European Psychodrama Training Organizations (FEPTO)

Lisbon hosts this event

Title: Doing qualitative Research in Psychotherapy

Abstract: This seminar offers the opportunity for participants to discuss their own qualitative research projects in the field of psychotherapy and counselling.

Title: Psychotherapy Research in Clinical Practice

Abstract: This seminar is targeted to academics and practitioners interested in integrating research in the daily routine of mental health delivery. It starts with an introductory overview of the basic concepts and major methodological approaches in psychotherapy research. A second section is dedicated to the presentation and discussion of research designs and instruments that have been successfully used in clinical naturalistic contexts, as part of the routine delivery procedure. A final section is dedicated to the discussion of participants’ own projects.

Professor Célia M.D.Sales, Psychologist, Family Therapist, PHd in mental health in Psychiatric context. Professor for Family Therapy, Statistics and Research Methods in Psychology. Director of the Post-Graduation Course on Family and Community Therapy, Universidade Autónoma de Lisboa (UAL). Current research projects: Individualized patient progress systems, qualitative-quantitative integration methods, multicultural families and healing systems. Related publications:

Title: Evaluation and assessment in routine psychological therapy: Theoretical and methodological issues

Abstract: In this workshop we will work from the theoretical and methodological foundations of the Clinical Outcome in Routine Evaluation (CORE) system and the complementary CORE-OM and shortened measures and also the PSYCHLOPS measure. It will be an opportunity to learn how to interpret and use routine measures in the light of the clinical encounter, i.e. individual, group, couple or family work, and the clinical modality, looking both to the research and the clinical service utility of using such measures routinely.

Professor Chris Evans, Professor of Psychotherapy in Nottingham and author of over 150 publications. He is a medical psychotherapist who came to psychiatry in 1984 aiming to go to public health medicine and immediately fell in love with psychotherapy, psychotherapy research and, soon after, the Society for Psychotherapy Research. He is trained in individual analytic/dynamic therapy (Royal College of Psychiatrists), Group Analysis (IGA) and family/systemic therapy (Prudence Skynner Clinic/Tavistock). His research interests have been more quantitative than qualitative but have included some qualitative work and hybrid methods including use of personal questionnaires (PSYCHLOPS) and repertory grids. He is a co-author of the CORE-OM and CORE system, lead for translations and trustee of the CORE System Trust.
Title: Mixing methods to relate process and outcome.

Abstract: Two research methodologies, each with both qualitative and quantitative aspects, will be used to explore ways that research may more successfully engage therapists in practice. I start from a fundamental problem that although there is strong evidence that psychotherapy is effective, we have little understanding of the processes by which it achieves its results. One limitation of current research is the concentration on psychological processes within the individual or at best, between the client and the therapist. The Leeds Attributional Coding System was developed to examine the causal expectations by which family members guide themselves and each other. The methodology will be illustrated by examples of application to family therapy sessions with an emphasis on how this originally constructivist technique provides insights into the operation of family relationships. These insights are then converted into detailed strategies for therapists working with individuals, couples and families.

The second methodology was modelled on the CORE project but is concerned with relationships rather than intra-individual change. The account of the research process to develop the SCORE provided in the earlier plenary, will be built on to consider the implications of measuring therapeutic effect through client reports of their family processes. Workshop participants will gain experience of using the two instruments so that we can jointly explore how they can be used to intrigue therapists and create practitioner research networks.

Professor Peter Stratton, Professor of Family Therapy at Leeds Family Therapy & Research Centre, University of Leeds. Peter Stratton is a Systemic Psychotherapist and psychologist with broad research interests and substantial involvement in statutory processes that affect the provision of psychotherapy. His own research includes development of an outcome measure for families in therapy (the SCORE project); the effects of basing training on concepts of active learning and the dialogical construction of self; the relationships of humour and creativity during psychotherapy; attributional analyses of family causal beliefs and blaming; public attitudes to terrorism by combining attributional coding with metaphor analysis; and fostering practitioner research networks. His current positions include: Editor of Human Systems; Academic and Research Development Officer for the Association for Family Therapy; Chair of the UKCP research faculty; Chair of European Family Therapy Association Research Committee.

Title: Case study research by practitioners and students: making the connection between systematic inquiry and personal/professional development

Abstract: Case study research has the potential to make a major contribution to the knowledge base for counselling and psychotherapy. The aim of this workshop is to examine some of the ways that both experienced practitioners, and students/trainees, can work together in groups to carry out systematic and rigorous case-based research. The workshop will offer an overview of concepts and methods in case study research, along with opportunities for experiential exploration of issues and dilemmas associated with this form of inquiry.

Professor John McLeod, Professor of Counselling at the University of Abertay Dundee. He is author of books and articles on many aspects of counselling and psychotherapy (including Case Study Research in Counselling and Psychotherapy, Sage, 2010), and is committed to the value of research as a means of informing practice.

We are looking forward to hearing from you!

Best wishes,

The Organising Committee
